CPSC 4300/6300: Applied Data Science

Dr. Tim Ransom

Clemson University

Background

- ▶ Appalachian State University
 - ▶ BS Computer Science
 - ▶ BS Computational Math
- ▶ Clemson
 - ▶ MS Computer Science
 - ▶ PhD Computer Science Education
- ▶ Music: black metal
- ▶ Hobby: foraging mushrooms and picking locks

2026-01-06

What to call me

- ▶ I'm fine with using my first name
- ▶ Do **not** call other instructors by their first name without them saying it's okay
- ▶ If I sign off an email as Dr. Ransom, that probably means I think there's a chance of somebody else reading it
 - ▶ More than likely, this means you've messed up
- ▶ Also, if you start an email to me as "Mr. Ransom" and somebody else reads it, they'll think you're being intentionally disrespectful. That's not true, right?

How to contact Tim

1. email is the best: tsranso@clemson.edu
2. schedule a meeting with link in syllabus
3. swing by the office: McAdams 129

└ What is Data Science

What is Data Science

The combination of statistical and computational techniques to extract meaning from data sets.

The Data Science Process

- ▶ Ask an interesting question
 - ▶ what is the scientific goal?
 - ▶ what would you do if you had **all** the data?
 - ▶ what do you want to predict or estimate?

The Data Science Process

- ▶ Ask an interesting question
 - ▶ what is the scientific goal?
 - ▶ what would you do if you had **all** the data?
 - ▶ what do you want to predict or estimate?
- ▶ Get the data
 - ▶ how were the data sampled?
 - ▶ which data are relevant?

The Data Science Process

- ▶ Ask an interesting question

- ▶ Communicate results
 - ▶ do the results make sense?
 - ▶ how do we use this to tell a **convincing** narrative?

Telling a narrative using data

1. data collection
 - ▶ wrangling, cleaning, and sampling of **appropriate** data
2. data management
 - ▶ accessing data quickly, easily, and reliably
3. data exploration
 - ▶ generating hypotheses and building intuition about the data
4. prediction, description, and building a model of the data
5. data communication
 - ▶ summarizing and **interpreting** results, particularly through visualization

Prerequisites — Statistics

- ▶ Understanding the:
 - ▶ concept of sampling distribution and statistical inference
 - ▶ logic of hypothesis testing
- ▶ Calculate and **interpret** confidence intervals

2026-01-06

Tools we'll be using

- ▶ The bulk of the work in this class will be in Python Jupyter notebooks
- ▶ You must complete at least the first notebook on the Palmetto cluster, but after that you may use your own environment then upload back to Palmetto
 - ▶ I will not be providing tech support for your laptop
